D1.3 Data Access Log and Repository Link

Repository: https://github.com/Nuha-Alodan/inshallah-phase1

Sources

Source	License	Files	Records	Accessed	Status
SFC-mini	CC BY-NC 4.0	63 txt files	8,866,859 posts	2026-10-09	downloaded
Gulf Arabic Tweets 2018–2020	CC BY 4.0	arab_gen_twitter.csv	108,052 tweets	2026-10-09	downloaded
SADA (text fields only)	CC BY-NC-SA 4.0	train.csv, valid.csv, test.csv	253,166 segments	2026-10-09	downloaded

Links: SFC-mini: https://huggingface.co/datasets/faisalq/SFC-mini

Gulf tweets: https://huggingface.co/datasets/AhmedSSabir/Gulf-Arabic-Tweets-2018-2020;%20

SADA: https://huggingface.co/datasets/MohamedRashad/SADA22

Downloaded: all three sources. **Requested:** none; all three are public downloads (SADA needs a free Kaggle account).

Licenses: SFC-mini and SADA allow non-commercial use only, and SADA requires the same license for derived data. Any release of annotated data should be non-commercial and follow the SADA terms or contain only IDs and labels.

Extraction prototype results

Occurrences of the formula found by the prototype, before removing duplicates (prototype_variant_counts.csv in the repository).

Source	Occurrences	Different spellings
SFC-mini	519,971	1,175
SADA	9,655	32
Gulf tweets	1,036	15
Total	**530,662**	**1,222**

How to run the extraction prototype (from the README)

1. Open https://colab.research.google.com, choose File → Open notebook → GitHub, paste the repository link and open code/inshallah_phase1_colab.ipynb.
2. In the Secrets panel, add KAGGLE_USERNAME and KAGGLE_KEY (needed for SADA).
3. Run cell 1: installs the packages, including CAMeL Tools.

4. Run cell 2: downloads SFC-mini, the Gulf tweets, and the SADA text files.
5. Run cell 3: finds every occurrence of the formula and counts the spellings.
6. Run cell 4: pulls the three real examples per label from the corpus.
